Partnerships in Innovative Climate Financing

Innovative financing plays a crucial role in closing the infrastructure funding gap and ensuring sustainable, climate-resilient development, particularly in low-income areas where traditional funding methods are inadequate. By leveraging strategies like impact investments, social bonds, and public-private partnerships, governments and project sponsors can access new resources and expertise, enhancing their ability to deliver quality services. The Asian Infrastructure Investment Bank (AIIB), in line with its Corporate Strategy, is actively exploring these creative financing solutions to meet the urgent need for sustainable funding. This session will convene leaders in the field of innovative financing to tackle the challenges faced by multilateral development banks (MDBs) and the development community in mobilizing financial resources, share success stories and discuss best practices, and examine technology's role in improving access to finance, especially concessional financing, for sustainable projects.

SPEAKERS

Opening Remarks	Hun Kim	Acting Vice President, Investment Solutions, AIIB (TBC)
